

What is claimed is

1. A key ring holder device, comprising, an extended post having at least one aperture running transversely therethrough, said post operatively connected to a shoulder, whereby when said device is affixed to a desired article having an interior side and an exterior side, such that said shoulder is positioned on said interior side and said extended  
5 post is extended to said exterior side, a user of said device can reversibly attach items to said device.
2. The device as set forth in Claim 1 further comprising a washer that fits over said post for securing said device to said desired article, said article selected from the group consisting of a garment, a belt, a purse, and luggage.
3. The device of Claim 1 wherein said post and said shoulder are threadedly connected to each other.
4. The device as set forth in Claim 1 wherein said post has only one aperture therethrough.
5. The device as set forth in Claim 1 wherein said at least one aperture is a double counter sunk hole.

6. The device as set forth in Claim 1 wherein said post and said shoulder are connected to each other at a 90° angle.

7. The device as set forth in Claim 1 wherein said post and said shoulder are connected to each other with a ball and socket connection.

8. The device as set forth in Claim 1, wherein said post and shoulder are integral with each other.

9. The device as set forth in Claim 1, wherein said shoulder has a cavity provided therein which permits said shoulder to fit over a button.

10. A key ring holder device, comprising:  
an extended post having at least one aperture running transversely there through;  
a shoulder having a center and being operatively connected to said post, said shoulder having a generally circular shape and having said post connected at about said center of said shoulder, said post having a length approximately the same as said diameter of said shoulder.
